# ANALYTIC SUBJECT INDEX TO PHYSICA A 158 (1989) No. 1

Asymptotic freedom 235, 251

Black holes 58, 499
- in canonical ensemble 425, 437
- in Euclidean gravity 425
Bosonic string (see Strings)
Boundary conditions
- in thermodynamics 425, 437

C*-algebras 200
Casimir effect 38
Causality 251
Chern–Simons term 33
Chirality 33, 169
Chromoelectric permeability tensor 136
Coarse graining
- in non-equilibrium quantum field theory 306, 317, 336, 399
Cohomology 251
Composite operators 77
Confinement 97, 158, 200
Cornwall–Jackiw–Tomboulis effective action 77
Cosmic strings 460, 479, 516
Cosmological back-reaction 399
Cosmological constant 536
Cosmology (see Early universe, Quantum cosmology)
Curved space–time (see Black holes, Early universe, Gravitation)

Damping rate (see Quark–gluon plasma, Plasma oscillations)
Dimensional reduction
- at high temperature 33, 178, 200
- in Kaluza–Klein theory 192
Dissipation
- in equilibrium quantum field theory 200
- in non-equilibrium quantum field theory 317, 399
Domain-wall formation
- in early universe 479
Duality 449
Dynamical symmetry breaking 64, 77
- in gauge theories 158

Early universe
- cosmic strings 460, 479, 516
- domain-wall formation 479
- inflation 343, 359, 366, 377
- non-equilibrium quantum field theory 366, 399
- phase transitions (also see Inflation) 460, 479
- primordial gravitational fluctuations 343
- quantum processes 261, 377, 399
- topological defects 460, 479
Effective action 85
- Cornwall–Jackiw–Tomboulis 77
- Gaussian 64
- Vilkovisky–DeWitt 192
Ensemble dependence
- in gauge theories 251
Entropy
- correlational 336
- generation 336, 399
Epstein zeta-function 38

Fluctuation–dissipation theorem
- in non-equilibrium quantum field theory 399
Fluid mechanics 317

Gauge dependence
- in quark–gluon plasma 97, 146, 189, 192, 226, 246
Gauge theories (also see Quark–gluon plasma)
- Coulomb gauge 189
- ensemble dependence 251
- Gauss law 158
- Green–Kubo formula 251
- global gauge transformations 158
- linear response theory 111, 192, 226, 246, 251
- time-axial gauge 251
- topology of gauge group 158
Gaussian
- density matrix 269
- effective action 269
Gluon condensation 97, 226
Gluon mass 97, 200

Goldstino 1
Gravitation (also see Black holes)
– Euclidean 425
– Jeans mass 387
– kinetic theory 261
– quantum field theory in curved space–time 366, 399
– semiclassical quantum 399
– string corrections to 359
– thermal instability 387
– thermodynamics 399, 425, 437
– two-dimensional 546
– Wigner function 261
Gravitational fluctuations 399
– in early universe 343
Green–Kubo formula 251
Gross–Neveu model 64

Hagedorn temperature 449, 460, 499, 516
Heretic string 499
Heterotic string 449
Higgs decay 47
Hypercylinder, quantum field theory on 58

Imaginary-time formalism 22, 38, 64, 77, 85, 146, 169, 178, 246, 251, 449, 499
Inflation
– chaotic 343
– through dynamical relaxation 343
– new 366
– through quantum fluctuations 377
– through superstrings 359
Infrared problem
– in quark–gluon plasma 97, 125, 200, 226

Jeans mass 387

Kaluza–Klein theory 192
Kinetic theory 291, 317
– relativistic 111
– in curved space–time 261
– in quark–gluon plasma 111, 136, 225
KMS
– condition 200
– ensemble 251

Landau damping
– in quark–gluon plasma 111, 146
Lattice (also see Monte Carlo)
– perturbation theory 125
Linear response theory
– in gauge theories 111, 192, 226, 246, 251
Liouville–von Neumann equation 269

Magnetic monopoles 158
Modular invariance 449, 516
Molecular chaos
Monte Carlo simulation
– of cosmic strings 479
– of quark–gluon plasma 125, 158

Nicolai map 1
Non-equilibrium quantum field theory (also see Kinetic theory)
– coarse graining 306, 317, 336, 399
– dissipation 317, 399
– early universe 366, 399
– entropy 336, 399
– entropy generation 336, 399
– fluctuation–dissipation theorem 399
– Schrödinger representation 269, 366, 377
– thermo field dynamics 291, 306, 317, 326
Non-shell unstable gluons 200

$O(N)$ scalar model 77,85

Phase transitions
– cosmological (also see Inflation) 460, 479
– non-equilibrium 326
– in string theory 449, 499
Plasma oscillations
– in quark–gluon plasma 111, 136, 146, 189, 192, 200, 225, 226, 246, 251
Projection operator formalism 317

Quantum cosmology 261, 546
Quantum chromodynamics (also see Quark–gluon plasma)
– $(QCD)_4$ 97
– $(QCD)_3$ 97
Quantum electrodynamics 47, 146, 178, 246
Quark–gluon plasma
– baryon number susceptibility 125
– chromoelectric permeability tensor 136
– damping rate (see Plasma oscillations)
– dimensional reduction 178, 200
– effective coupling constant 235
– energy density 125
– finite-size lattice effects 125
– gauge dependence 97, 146, 189, 192, 226, 246
– gluon self-energy 125, 146
– infrared problem 97, 125, 200, 226
– instability (see Plasma oscillations)
– kinetic theory 111, 136, 225
– Landau damping 111, 146
– lattice perturbation theory 125
– linear response theory 111, 192, 226, 246, 251

- magnetic monopoles 158
- magnetic screening 235
- mean field approximation 111
- Monte Carlo simulation 125, 158
- non-perturbativeness 97, 200, 226
- plasma oscillations 111, 136, 146, 189, 192, 200, 225, 226, 246, 251
- pressure 125
- renormalization 235
- scattering amplitudes 146
- spectral representation of gauge propagator 146, 169
- state space of 200
- sum rules 169

Quasiparticles
- statistical 22
- in non-equilibrium thermo field dynamics 291, 306, 326

Real-time formalism 47, 235, 387
Renormalization 47,306
- and boundary conditions 38
- momentum-space subtractions 235
- in non-equilibrium quantum field theory 291,306,326
- quark–gluon coupling constant 235
- in Robertson–Walker space–time 366, 377

Renormalization group 178, 235
Robertson–Walker metric (also see Early universe)
- renormalization in 366, 377

Scalar field 22,64
- in curved space–time 261, 343, 387
- in non-equilibrium quantum field theory 261, 291, 399
- $O(N)$ 77,85

Scattering amplitudes
- in hot gauge theories 146
- in quantum electrodynamics 47

Schrödinger representation
- in non-equilibrium quantum field theory 269, 366, 377

Schwinger–Dyson equations 77, 97
Self-energy
- fermion 47
- gluon 125, 146
- photon 146
- string 536

Spectral representation
- of gauge propagator 146, 169

Spin-statistics theorem 158
Spontaneous symmetry breaking 22, 64, 85, 192
Stability
- in gravitational thermodynamics 425
- of plasma oscillations (see Quark–gluon plasma, Plasma oscillations)

Statistical quasiparticles 22
Strings
- canonical ensemble 516
- cosmic 460, 479, 516
- duality 449
- Hagedorn temperature 449, 460, 499, 516
- heretic 499
- heterotic 449
- inflation and 359
- microcanonical ensemble 449, 516, 546
- modular invariance 449, 499, 516
- Monte Carlo simulation of cosmic 479
- networks 516
- phase transition 449, 499
- propagator 536
- self-energy 536
- specific heat 499, 516
- statistical mechanics 460, 499, 516
- thermo field dynamics 536
- winding modes 499, 516

Sum rules 169
Superfluidity 326
- relativistic 22

Superselection sectors 200
Superstrings (see Strings)
Supersymmetry 1, 359
Symmetry breaking
- dynamical 64, 77, 158
- spontaneous 22, 64, 85, 192
- of supersymmetry 1

Temperature, breakdown of concept of 516
Thermo field dynamics 1, 58, 200, 306, 536
- non-equilibrium 291, 306, 317, 326
- quasiparticles 291, 306, 326

Third quantization 546
Topological defects
- in early universe 479

Triality 158

Uncertainty principle 336
Universe (also see Early universe)
- disappearance of 499

Variational principles in field theory 269
Vilkovisky–DeWitt effective action 192

Wigner function
- in quark–gluon plasma 111, 136
- in curved space–time 261

Witten index 1

# ANALYTIC SUBJECT INDEX TO PHYSICA A 158 (1989) Nos. 2&3

*Aggregation* (see *Diffusion-limited aggregation*) 158 (1989) 801

*BBGKY-hierarchies, quantum*
– Quantum BBGKY-hierarchies and Wigner's equation in postgalilean approximation - Orlov and Pavlotsky 158 (1989) 607
*Birefringence, electric*

*One-particle distribution function* (see *Dipolar fluid–wall systems*) 158 (1989) 619
*Onsager symmetry* (see *Maximum entropy formalism*) 158 (1989) 672

*Pair distribution function* (see *Dipolar fluid–wall systems*) 158 (1989) 633

*Plastic phase* (see *Molecular liquids*) 158 (1989) 817
*Polyatomic gases*
– A model for rotational energy exchange in— - Kuščer 158 (1989) 784
*Postgalilean approximation* (see *Wigner equation*) 158 (1989) 607

*Quantum gases* (see *Quantum kinetic equations*) 158 (1989) 559
*Quantum kinetic equations*
– A derivation of—for a gas of composite particles - de Haan 158 (1989) 559

*Resonance fluorescence*
– Collective—in the presence of a thermal reservoir - Lan et al. 158 (1989) 656
*Rotational energy exchange* (see *Polyatomic gases*) 158 (1989) 784

*Shift operator matrix* (see *Ising lattices, two-dimensional*) 158 (1989) 740
*Spherical model*
– A probabilistic view on finite-size scaling in infinitely coordinated—s - Brankov and Danchev 158 (1989) 842
*Spin-$\frac{1}{2}$ model* (see *Spin systems, open*) 158 (1989) 769
*Spin systems, open*
– Comparison between different Markov approximations for open spin systems - Celio and Loss 158 (1989) 769
*Squeezed light*
– Jaynes–Cummings model interacting with— - Rustamov et al. 158 (1989) 649

*Two-level atom system* (see *Fluorescence, collective resonance*) 158 (1989) 656

*Wigner crystal* (see *Coulomb systems, two-dimensional*) 158 (1989) 706
*Wigner equation*
– Quantum BBGKY-hierarchies and Wigner's equation in postgalilean approximation - Orlov and Pavlotsky 158 (1989) 607

*Zwanzig–Nakajima master equation* (see *Markov approximations*) 158 (1989) 769
